Room Availability

Showing business hours (08:00–17:00).

	08:00	09:00	10:00	11:00	12:00	13:00	14:00	15:00	16:00	17:00
Ash Capacity 8		Design review					1:1 · Priya			
Boardroom Capacity 14		Ops standup		Board meeting						
Cedar Capacity 6			Interview						Retro	
Snug Capacity 4							Client call			
Willow Capacity 8			Q3 planning							Handover

Have a look around first

There's a live demo you can sign into right now. Book a room, flick through the day, watch a calendar fill up — nothing to install, nobody to email.

mootmaker.com

Six things that make rooms stop being a daily annoyance

Most room booking tools are inherited rather than chosen. Mootmaker is built around the two things people genuinely do all day: find a room that's free, and see who's where.

Booked in seconds

One screen, one form. No wizard to click through, and no walking the corridor to see if a room is actually free.

Never double-booked

Two meetings can't clash in the same room, and a meeting can't be squeezed into a room that's too small for it.

No queue at the IT desk

People create their own accounts and reset their own passwords. Nobody has to raise a ticket just to sign in.

Pleasant to use

A clean, purpose-designed interface that follows each person's light or dark mode — and works just as well on a phone in a corridor.

Your instance, not a shared one

Each customer gets their own deployment, their own data and their own address. Your bookings never sit in a database next to somebody else's.

Costs follow use

It runs on cloud infrastructure that bills for what's actually used, rather than a fixed server sitting there all month.

Booking a room, and seeing what's free

One form, one screen

- Subject, who's organising, who's coming, the date, the time, the room — all on one screen, with nothing to click through first.
- The usual mistakes are caught before they happen: no clashes, no meetings bigger than the room, and no organiser accidentally listed as their own attendee.
- If something won't work, you're told everything at once — not one problem at a time.

“Suggest a room” does the looking for you

Press it and Mootmaker finds the smallest room that's free at that time and still fits everyone, then fills it in. Not keen? Press it again for the next best one.

Everyone's calendar, one click away

- A six-week wall calendar of everything a person is organising or attending — a month and a half of their time in one glance, with no clicking from week to week.
- Type a colleague's name to switch to their calendar, then share the link so they open exactly the view you were looking at.
- Every meeting is dotted in its room's colour — the same colours as the day view — so you can see where someone will be, not just when.

Easy for everyone, and barely any work to run

Everyone's schedule, one click away

Each person has a six-week wall calendar of everything they're organising or attending. Search for a colleague by name, then share the link so they see exactly the same view. The home page opens on your own **Today** and **Tomorrow**.

Signing up looks after itself

Name, email, password and you're in, in under a minute — no approval needed. A short email check keeps sign-ups genuine, and forgotten passwords are a self-service reset by email at any hour, not a support call.

One Settings screen

Rooms (a name and a capacity) and people, in one place, with nothing extra to learn. Visitors and contractors can be added as a person and booked into meetings without ever needing a login. Rename anyone and the change shows up everywhere at once.

Security your IT team can check off

Sign-in is built on Amazon Cognito: passwords are never sent or stored in the clear, and sessions use short-lived tokens that refresh themselves rather than one permanent credential. Every rule is enforced on the server, and admin rights are granted outside the app, so nobody can promote themselves.

A deployment of your own

Your own database, your own accounts, your own sign-in and your own address — `yourcompany.mootmaker.com`.

Running in days, not months

A new deployment is quick to stand up, and it bills for real use rather than fixed capacity — so there's no long implementation to sit through.

Mootmaker

The quickest way to understand it is to book a room in it.

The demo is live and open — book something, browse the day, watch a calendar fill in. Five minutes will tell you more than this page can.
